

Are you ready to take the Inch Woodland Challenge?

# The Inch Woodland Challenge

Answer the questions and complete the tasks.

1

What is a Habitat?

2

What type of Habitat did you visit today?

3

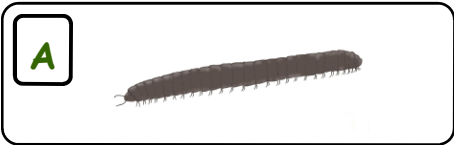

Name the 4 layers of the woodland

4

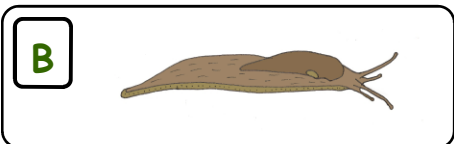

Which Layer would you find the most sunlight?

5

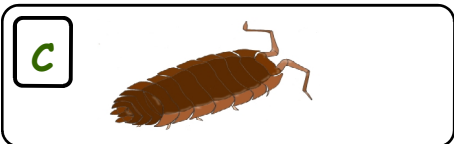

Identify the 3 leaf litter invertebrates below

A

B

C

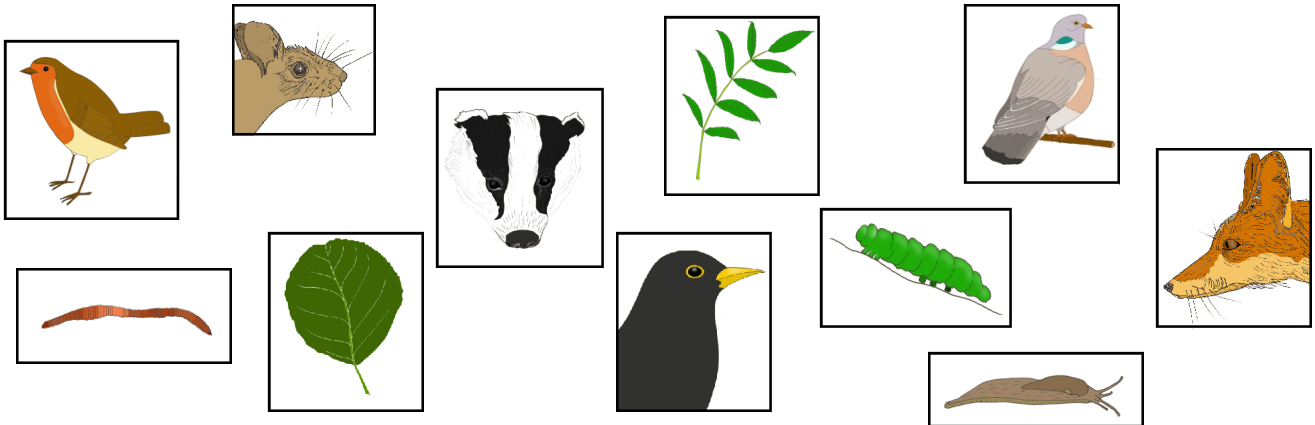

6

What is an invertebrate?

7

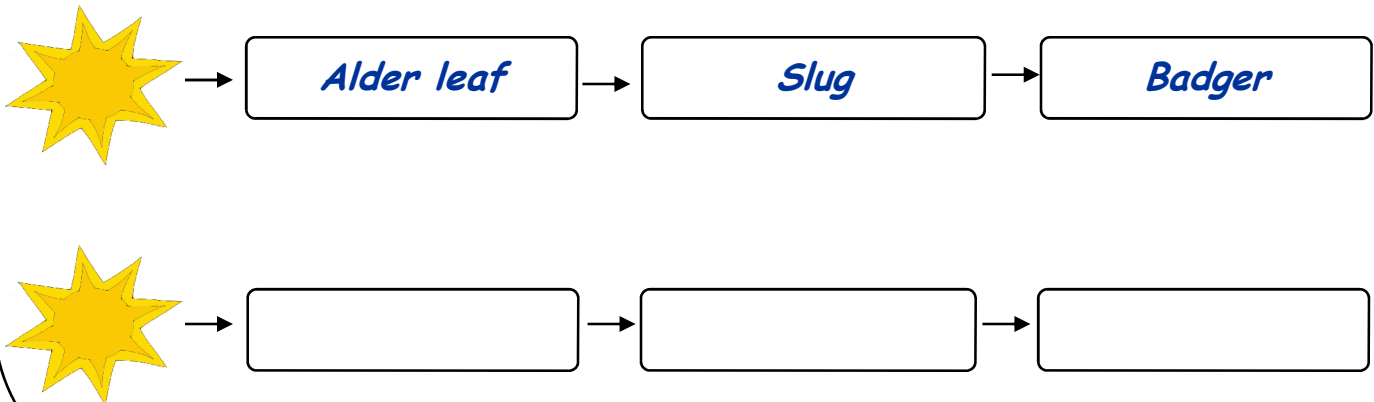

### Woodland food chains

Plants and animals in the woodland can be linked together by the food they eat. Look at these pictures of some of the plants and animals living in Inch Woodland. Who eats what?

Using the animals and plants in the pictures make your own woodland food chain. Remember that plants are **primary producers** and get their energy from the sun. Animals are **consumers** and get their energy from the plants or from eating other animals!

Here is an example

8

What is the name given to the groups of animals that only eat plants?

9

What is the name given to the groups of animals that only eat other animals?

10

Display your team's results from your woodland invertebrate hunt.

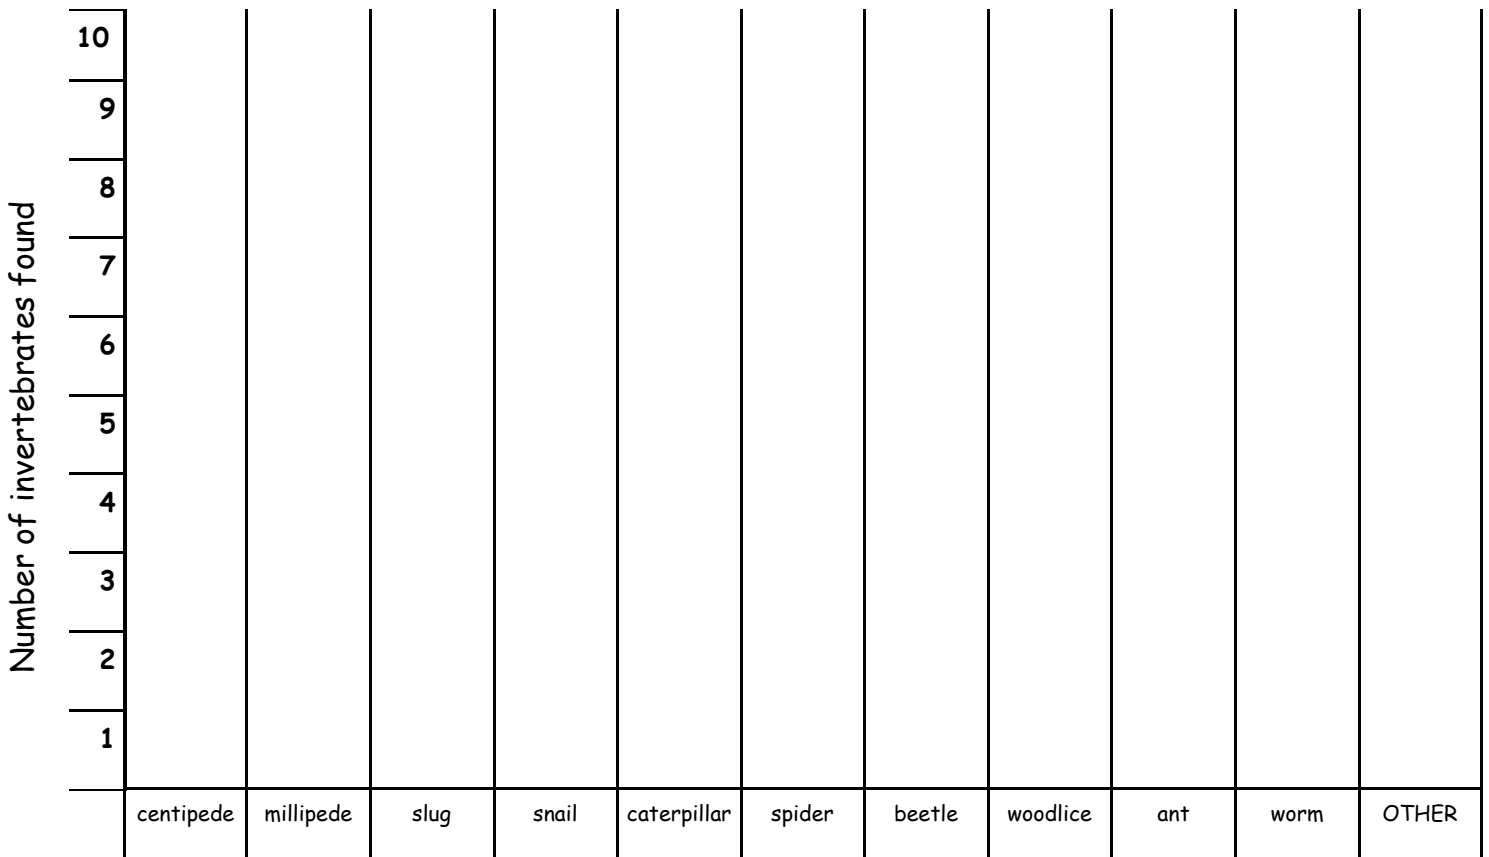

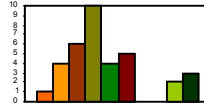

A

Enter the results of your team's invertebrate hunt in the table below. Fill in the blanks to record the name and quantity of invertebrates you found.

Name of the invertebrate	The number found	Where you found it

B

Now display your results as a bar graph

Invertebrates
