NPWS (2013) Conservation Objectives: Long Bank SAC 002161. Version 1. National Parks and Wildlife Service, Department of Arts, Heritage and the Gaeltacht.

> Series Editor: Rebecca Jeffrey ISSN 2009-4086

#### Introduction

The overall aim of the Habitats Directive is to maintain or restore the favourable conservation status of habitats and species of community interest. These habitats and species are listed in the Habitats and Birds Directives and Special Areas of Conservation and Special Protection Areas are designated to afford protection to the most vulnerable of them. These two designations are collectively known as the Natura 2000 network.

European and national legislation places a collective obligation on Ireland and its citizens to maintain habitats and species in the Natura 2000 network at favourable conservation condition. The Government and its agencies are responsible for the implementation and enforcement of regulations that will ensure the ecological integrity of these sites.

A site-specific conservation objective aims to define favourable conservation condition for a particular habitat or species at that site.

The maintenance of habitats and species within Natura 2000 sites at favourable conservation condition will contribute to the overall maintenance of favourable conservation status of those habitats and species at a national level.

Favourable conservation status of a habitat is achieved when:

- its natural range, and area it covers within that range, are stable or increasing, and
- the specific structure and functions which are necessary for its long-term maintenance
- exist and are likely to continue to exist for the foreseeable future, and
- the conservation status of its typical species is favourable.

The favourable conservation status of a species is achieved when:

• population dynamics data on the species concerned indicate that it is maintaining itself on a long-term basis as a viable component of its natural habitats, and

• the natural range of the species is neither being reduced nor is likely to be reduced for the foreseeable future, and

• there is, and will probably continue to be, a sufficiently large habitat to maintain its populations on a long-term basis.

#### Notes/Guidelines:

1. The targets given in these conservation objectives are based on best available information at the time of writing. As more information becomes available, targets for attributes may change. These will be updated periodically, as necessary.

2. An appropriate assessment based on these conservation objectives will remain valid even if the targets are subsequently updated, providing they were the most recent objectives available when the assessment was carried out. It is essential that the date and version are included when objectives are cited.

3. Assessments cannot consider an attribute in isolation from the others listed for that habitat or species, or for other habitats and species listed for that site. A plan or project with an apparently small impact on one attribute may have a significant impact on another.

4. Please note that the maps included in this document do not necessarily show the entire extent of the habitats and species for which the site is listed. This should be borne in mind when appropriate assessments are being carried out.

5. When using these objectives, it is essential that the relevant backing/supporting documents are consulted, particularly where instructed in the targets or notes for a particular attribute.

002161 Long Bank SAC

1110 Sandbanks which are slightly covered by sea water all the time

Please note that this SAC adjoins Carnsore Point SAC (002269) and Blackwater Bank SAC (002953). See map 2. The conservation objectives for this site should be used in conjunction with those for adjacent sites as appropriate.

### Conservation Objectives for : Long Bank SAC [002161]

### **1110** Sandbanks which are slightly covered by sea water all the time

#### To maintain the favourable conservation condition of Sandbanks which are slightly covered by sea water all the time in Long Bank SAC, which is defined by the following list of attributes and targets:

| Attribute                 | Measure    | Target   | Notes  |
|---------------------------|------------|--|--|
| Habitat area              | Hectares   | The permanent habitat<br>area is stable or increasing,<br>subject to natural<br>processes. See map 3   | Habitat area estimated as 1319ha using the<br>Carnsore Point to Wicklow Head Admiralty Chart<br>(no. 1787-0)                                     |
| Habitat<br>distribution   | Occurrence | The distribution of<br>sandbanks is stable or<br>increasing, subject to<br>natural processes. See<br>map 3   | Distribution established using the Carnsore Point to Wicklow Head Admiralty Chart (no. 1787-0)   |
| Community<br>distribution | Hectares   | Conserve the following<br>community type in a<br>natural condition: Sand<br>with <i>Nephtys cirrosa</i> and<br><i>Bathyporeia elegans</i><br>community complex. See<br>map 4 | The likely area of the community was derived from a sandbank survey in 2007 (Aquafact, 2007). See marine supporting document for further details |
