- **Group:** A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles
- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

### Other Site Characteristics

---

Dromore Lough and surrounding woodland is situated on the southern edge of the Clare limestone. It is a continuation of the Burren landscape although at a lower elevation. The natural vegetation is *Corylus avellana* and *Fraxinus excelsior* wood but this has been interplanted with exotic conifers. There are small areas of limestone pavement and a series of naturally eutrophic lakes with extensive marginal grasslands, fen and scrub. An outbuilding at Dromore House provides a summer breeding site for *Rhinolophus hipposideros*. The site plays host to an important invertebrate fauna and provides ideal habitat for *Martes martes* and *Meles meles* both Red Data Book species.

#### 4.2 Quality and importance

The great value of this area lies in the mosaic of vegetation types: scrub, limestone pavement, lakes, lake shore communities, reed beds and grassland. Between them there is a great wealth of plants and a variety of habitats for animals. 9% of the site consists of the Annex I priority habitat limestone pavement, with 13% cover for naturally eutrophic lakes, also Annex I. Eutrophic tall herb vegetation is also represented. *Lutra lutra* (Annex II) and *Martes martes* (Red Data Book) are both recorded within this site. The population of *Rhinolophus hipposideros* is of International Importance and one of the largest breeding sites in the country. Wintering waterfowl populations are of local importance.

#### 4.3 Threats, pressures and activities with impacts on the site

The most important impacts and activities with high effect on the site
