**Other Site Characteristics**

A relatively large complex of oakwood developed on brown earth, brown podzolic & gleyed soils, situated on rocky slopes on either side of the River Sullane. Seepage zones, small watercourses, a narrow, rocky defile and areas of rock outcrop occur within the woodlands.

**4.2 Quality and importance**

Although partially degraded through the presence of exotic trees and an area of dense *Rhododendron ponticum* and *Prunus laurocerasus*, this wood is of value as a good example of old oak woodland. Notable for its particularly rich ground flora, including *Saxifraga spathularis*, *Euphorbia hyberna* and a range of bryophytes. It is also habitat for *Geomalacus maculosus* and foraging area for seven species of bat.
