- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

### Other Site Characteristics

This site, lying within 2-3km of Galway Bay, is within the stretch of flat low-lying bare limestone known as the Ardahan limestones. It is characterised by a complex of habitats, some of which are scarce and specialised. It includes a number of oligotrophic turloughs in which the characteristic vegetation is well developed. Limestone pavement is well represented along with calcareous grassland, juniper scrub and the rare lowlands *Arctostaphylos* - *Dryas* heath. There are also some infilling shallow turlough-type lakes. The well-known 'Burren flora' is well-represented. A large building at Cloghballymore provides a breeding site for

the Lesser Horseshoe Bat (*Rhinolophus hipposideros*), while surrounding mixed woodland provides ideal foraging habitat.

## 4.2 Quality and importance

This site has six annexed habitats, including four priority habitats - turloughs, orchid-rich calcareous grassland, cladium fen and limestone pavement. The turlough habitat is one of the largest and most important in the country. The interplay and gradation between habitats results in valuable zonation and a diversity of conditions suiting many less common species. The site has an internationally important breeding population of *Rhinolophus hipposideros*. Some scarce invertebrate species occur at the site, and two Red Data Book plant species.
