- **Group:** A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles
- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

3.3 Other important species of flora and fauna (optional)

Other Site Characteristics

Relatively large estuarine site on south-east coast of Ireland. Typical coastal estuary with large areas of mud and sand and restricted access to the sea. Small rivers and streams to the north and south-west flow into the bay. The southern end of the site supports a mosaic of sand dune types, sea cliffs of clay, and rock and extensive sandy beaches. Northern end supports freshwater habitats of marsh, wet woodland and non-tidal reedbed. The geology of the site is mainly Ordovician slate rocks with some Cambrian slate at the south-east.

4.2 Quality and importance

Site is important for presence of eleven habitats listed on Annex I of Habitats Directive. Halophilous scrub at the site is one of only two examples in the country. The legally protected *Arthrocnemum perenne* is found there. The site includes an important SPA. Internationally important numbers of *Branta bernicla hrota* found and nationally important numbers of *Tadorna tadorna*, *Anas acuta*, *Calidris*, *Vanellus vanellus*, *Calidris alpina*, *Limosa limosa islandica*, *L. lapponica*, *Tringa totanus* and *Plurialis apricaria* *Egretta garzetta*, *Alcedo atthis* and *Sterna albifrons* are found and possibly breed in the site. A substantial heronry is located at south-west of site.

4.3 Threats, pressures and activities with impacts on the site
