3. ECOLOGICAL INFORMATION

3.1 Habitat types present on the site and assessment for them

[Back to top](#)

Annex I Habitat types						Site assessment			
Code	PF	NP	Cover [ha]	Cave [number]	Data quality	A B C D	A B C		
						Representativity	Relative Surface	Conservation	Global
3160			164.6		G	A	A	A	A
4010			190.48		M	B	C	B	B
7130	X		6285.73		M	A	B	A	A
7150			95.24		M	A	B	A	A
7230			476.19		M	A	B	A	A

- **PF:** for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.
- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

Species				Population in the site						Site assessment				
G	Code	Scientific Name	S	NP	T	Size		Unit	Cat.	D.qual.	A B C D		A B C	
						Min	Max				Pop.	Con.	Iso.	Glo.
P	1528	Saxifraga hirculus			p	3707	3707	i		G	C	A	A	A
I	1013	Vertigo geyeri			p				P	DD	B	A	A	A

- **Group:** A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles
- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

3.3 Other important species of flora and fauna (optional)

- **Group:** A = Amphibians, B = Birds, F = Fish, Fu = Fungi, I = Invertebrates, L = Lichens, M = Mammals, P = Plants, R = Reptiles
- **CODE:** for Birds, Annex IV and V species the code as provided in the reference portal should be used in addition to the scientific name
- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Unit:** i = individuals, p = pairs or other units according to the standard list of population units and codes in accordance with Article 12 and 17 reporting, (see [reference portal](#))
- **Cat.:** Abundance categories: C = common, R = rare, V = very rare, P = present
- **Motivation categories:** **IV, V:** Annex Species (Habitats Directive), **A:** National Red List data; **B:** Endemics; **C:** International Conventions; **D:** other reasons

4. SITE DESCRIPTION

4.1 General site character

Other Site Characteristics

A large expanse of lowland blanket bog, with numerous pools and dystrophic lakes, developed on gently undulating glacial drift overlying shales and sandstone and bordering carboniferous limestone to the east. Shallow stream valleys, bordered by humid grassland and heath vegetation, dissect the lowland plain. Site is notable for the widespread occurrence of flush and fen vegetation derived from mineral-rich and often calcareous groundwater seepage areas.

4.2 Quality and importance

Probably one of the largest and finest examples of intact lowland blanket bogs in Ireland, with exceptionally well developed pool complexes and dystrophic lakes. Rhynchosporion vegetation is well represented in many of the pool areas out in the wet, quaking bog area. Groundwater seepage areas are widespread and support a range of fen vegetation assemblages, including some of the best alkaline fens in the country, notable for their diversity of structure and species, especially rare boreal relict fen mosses such as *Leiocolea rutheana*, *Homalothecium nitens* and *Paludella squarrosa*. One of only 4 locations for *Saxifraga hirculus*, an Annex II species. The site formerly supported wintering *Anser albifrons flavirostris*. Additional areas are included in the site under EU LIFE funded restoration projects.

4.3 Threats, pressures and activities with impacts on the site

The most important impacts and activities with high effect on the site
