- [7. MAP OF THE SITE](#)

## 1. SITE IDENTIFICATION

<b>1.1 Type</b> B	<b>1.2 Site code</b> IE0002173	<a href="#">Back to top</a>
----------------------	-----------------------------------	-----------------------------

### 1.3 Site name

Blackwater River (Kerry) SAC

<b>1.4 First Compilation date</b> 1999-12	<b>1.5 Update date</b> 2018-09
--	-----------------------------------

### 1.6 Respondent:

**Name/Organisation:** National Parks and Wildlife Service, Department of Culture, Heritage and the Gaeltacht  
**Address:** 90 King Street North, Dublin 7, D07 N7CV, Ireland  
**Email:** datadelivery@chg.gov.ie

<b>Date site proposed as SCI:</b>	1999-12
<b>Date site confirmed as SCI:</b>	No data
<b>Date site designated as SAC:</b>	No data
<b>National legal reference of SAC designation:</b>	No data

## 2. SITE LOCATION

2.1 Site-centre location [decimal degrees]:

[Back to top](#)

I	1024	<a href="#">Geomalacus maculosus</a>			p				P	DD	B	A	C	B
M	1355	<a href="#">Lutra lutra</a>			p				P	DD	C	A	C	A
I	1029	<a href="#">Margaritifera margaritifera</a>			p				P	DD	B	A	C	A
M	1303	<a href="#">Rhinolophus hipposideros</a>			r	150	150	i		M	C	A	B	B
F	1106	<a href="#">Salmo salar</a>			r				C	DD	C	A	C	A

- **Group:** A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles
- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

### 3.3 Other important species of flora and fauna (optional)

Species			Population in the site					Motivation						
Group	CODE	Scientific Name	S	NP	Size		Unit	Cat.	Species Annex		Other categories			
					Min	Max		C R V P	IV	V	A	B	C	D
A		<a href="#">Rana temporaria</a>											X	
A		<a href="#">Rana temporaria</a>								X				
P		<a href="#">Wahlenbergia hederacea</a>												X

- **Group:** A = Amphibians, B = Birds, F = Fish, Fu = Fungi, I = Invertebrates, L = Lichens, M = Mammals, P = Plants, R = Reptiles
- **CODE:** for Birds, Annex IV and V species the code as provided in the reference portal should be used in addition to the scientific name
- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Unit:** i = individuals, p = pairs or other units according to the standard list of population units and codes in accordance with Article 12 and 17 reporting, (see [reference portal](#))
- **Cat.:** Abundance categories: C = common, R = rare, V = very rare, P = present
- **Motivation categories:** IV, V: Annex Species (Habitats Directive), A: National Red List data; B: Endemics; C: International Conventions; D: other reasons

## 4. SITE DESCRIPTION

### 4.1 General site character

[Back to top](#)

---

Habitat class	% Cover
N23	1.0
N10	45.0
N22	1.0
N07	5.0
N08	18.0
N20	19.0
N09	3.0
N16	1.0
N14	5.0
N06	2.0
<b>Total Habitat Cover</b>	<b>100</b>

### Other Site Characteristics

This site is situated on the south-western slopes of the Macgillycuddy Reeks, overlooking the Kenmare River inlet. The underlying geology is Old Red Sandstone. The site comprises most of the catchment of the Blackwater River system. Two other main rivers, the Kealduff and Derreendarragh, link into the Blackwater and these rivers are characterised by having numerous tributary streams. The rivers rise at altitudes of up to 600 m and flow quite rapidly over their journey of about 10 km to the sea. The principal habitats within the site are upland grassland and various types of heaths. The grassland is improved to varying extents. Where the peat is deeper blanket bog has developed, though much of this is now cutaway. Deciduous woodland occurs along some of the rivers. Coniferous afforestation is a significant landuse within the site.

### 4.2 Quality and importance

This site has an extensive network of good quality watercourses which support one of the largest populations of *Margaritifera margaritifera* in the country and has a population of *Lutra lutra*. The rivers are also important salmonid fisheries and are of high importance for the conservation of *Salmo salar*. The site contains an internationally important population of *Rhinolophus hipposideros* (>150 individuals) and includes both the breeding site and the surrounding foraging habitat. *Geomalacus maculosus* is frequent within the site where suitable open heath habitat occurs. The site includes areas of dry heath.

### 4.3 Threats, pressures and activities with impacts on the site

The most important impacts and activities with high effect on the site

Negative Impacts			
Rank	Threats and pressures [code]	Pollution (optional) [code]	inside/outside [i o b]
M	A04		b
M	A08		i
M	D01.02		i
L	E01.03		i
M	A02		i
H	B		i
M	C01.03.02		i
H	B		o

Positive Impacts			
Rank	Activities, management [code]	Pollution (optional) [code]	inside/outside [i o b]
L	X		i

Rank: H = high, M = medium, L = low

Pollution: N = Nitrogen input, P = Phosphor/Phosphate input, A = Acid input/acidification, T = toxic inorganic chemicals, O = toxic organic chemicals, X = Mixed pollutions

i = inside, o = outside, b = both
